Mountain Weather Forecast

Ground Conditions Supplement

Date: Saturday 20 February. Location: Helvellyn summit at 12:30. We are continuing to provide the Fell Top Reports for people undertaking their daily local exercise during the lockdown. We would like to remind everyone that Government guidance stipulates that people should only exercise locally to where they live. A challenging day of strong gusty winds and torrential rain for the Lake District. Windspeeds on the summit of Helvellyn rose from 15mph to 80mph while the fell top assessors was taking his observations! The thaw is continuing at all levels with summit temperatures of 5 degrees C. The ground is generally saturated and becks, streams & rivers are in spate with associated hazards. The few remaining isolated patches of snow are generally to be found above 750m on N through E aspects. Many routes are now snow free including the Swirls path on Helvellyn from the Thirlmere side. Striding & Swirral Edges can almost be climbed without setting foot on snow. However there are a few unavoidable patches including the steep exit slopes on which a slip would have very serious consequences. There is also a surprising amount of sheet ice to contend with here and on the Helvellyn plateau where the snow has been compressed by walkers feet and around the edges of the remaining snow patches. Microspikes and an ice axe as a minimum but preferably crampons are strongly recommended for anyone tackling steep and exposed terrain where they may have to cross areas of snow. As a result of freeze thaw action there is now also a lot of loose rock on the fells including on popular routes such as Swirral Edge. Full winter clothing and equipment are still required by anyone venturing onto the Lake District fells. Hypothermia is a very real risk in the current wet and windy conditions especially if you are ill equipped, lost, injured and or exhausted. Please be conservative with your plans and know both your limits and also when to turn back. Temperature: plus 5.5C, Maximum wind speed 80.2mph, Wind chill: minus 2.9C, Average wind speed: 35.8mph.
